User Interface for the Oracle Digital Assistant

Browser-compatible web SDK to create engaging interfaces.

Fishbowl Solutions can help you create the best user experience for your Oracle Digital Assistant

Oracle's Digital Assistant is an industry-leading platform to create conversational experiences to drive business processes. The Oracle Digital Assistant (ODA) comes packed with features to initiate dialogue and answer questions to help the user get to the information they need. This is made possible through multi-purpose skills to help users check on sales orders within an ERP system, view their PTO balance from an HCM system, or even track their order from an online retailer. Although all these types of interactions are made possible by ODA, through no-code development and the ability to import already-established FAQs, one of the most important components of the conversational experience is the user interface or UI. Fishbowl Solutions offers a ready-made UI for ODA that not only enhances and eases the conversation, but also can be extended to virtually any ODA use case.

User Interface for any Browser, as well as Windows, IOS, and Android Mobile Devices

Fishbowl's UI for ODA is a browser-compatible web SDK (standard development kit) that can be leveraged for the overall conversational design of your company's digital assistant for websites and mobile devices. Your company's brand color palette can easily be incorporated. With its out-of-the-box capabilities, your organization will shorten the overall time to value for your digital assistant implementation.

Features to Extend the Capabilities of the Oracle Digital Assistant

Fishbowl Solutions' user interface for ODA comes loaded with these purpose-built features:

- Navigation menu
- Card mode or classic mode
- Configurable dashboard
- Hover over tool tips
- Highlight past selection
- Breadcrumbs
