Products and technologies like Slack, Google Search, mobile applications, and chatbots have all provided new and better ways for employees to access information, collaborate with others, and complete tasks. However, companies still struggle with pulling together and technologies into a single, secure, mobile experience. Instead, employees have to use multiple systems to find information, collaborate on topics, and socialize with others. This alone can overwhelm employees, so they will avoid these systems, causing them to miss out on company news and leading to disengagement. Disengaged employees are not as productive and therefore not as profitable. They are also quick to leave and join another company. With the high cost to attract, hire, and onboard new employees, companies need to do a better job communicating with and engaging current employees. By leveraging Fishbowl's CX Content Accelerator for an Employee Engagement Portal, companies can quickly deploy a one-stop, mobile portal with content management, collaboration, and social capabilities to drive better employee engagement.

these products personalized, and

## Ensure Better Communication and Increase Employee Engagement - All from a Single Application

Fishbowl's CX Content Accelerator for an Employee Engagement Portal leverages the best in content management, collaboration, and social capabilities of Oracle Content CX, exposing these and other engagement features and platform integrations through a progressive web application. Through this application, employees have access to personalized content feeds, shared documents, voice and video chat, social feeds, and a personal digital assistant (chatbot) for questions. With a single application providing all these capabilities, companies can ensure that relevant communications are seen and employees have the desired engagement tools needed to stay connected.

## Integrate with PeopleSoft HCM and other HR Systems

Leverage the inherent capabilities of PeopleSoft HCM (human capital management) and other human resources (HR) systems by providing access to training, performance management, leave management, and benefits information all from the application. Employees can access this information while on the go.

## Oracle CX Content Partner

Fishbowl has extensive experience across mobile-first web design, digital asset management, and overall content management. This makes us the preferred Oracle Content CX partner to help your organization build and deliver omnichannel experiences around content.
